

Lash Botox

Lash Botox is a hydrolyzed keratin mask designed to specifically nourish and stimulate natural lash growth. Lash

Botox contains collagen, tocopherol, argan oil and panthenol, all of which work together to achieve maximum results.

Eyelash hair consists of 97% Keratin. Lash Botox consists mostly of hydrolyzed keratin and collagen nourisher. The

Keratin is decreased into small particles in order to be absorbed by even the thinnest of lashes.

The nourishing mask fills the natural lashes with keratin to make them smoother, thicker and fuller. The serum contains an improved formula with a long-lasting effect of up to 6 to 8 weeks - with no maintenance or special care required. Despite the

name and presence of a needle, no injections are made!
